

Environmental Declaration Type II

GENERAL PRODUCT INFORMATION

Name of product(s)	Packaging
HCV, VCV, XCV, IO-V, RU1 & RU2 series	Cardboard

COMPANY INFORMATION

Company, address and telephone

AB Regin

Box 116

SE-428 22 Källered

Sweden

Tel: +46 - (0)31 - 720 02 00

E-mail: info@regin.se

Company description

Regin is the collected trademark for products and systems in building automation. The company's knowledge is based on many years of wide experience in control, automation and flow control.

AB Regin has a certified quality assurance system according to ISO 9001.

Ongoing environmental work

Regin designs products on commission from clients as well as for resale. Regin can control environmental aspects related to product development and when choosing suppliers and components.

PRODUCT INFORMATION

General

The recommended field of application is stated in the technical documentation.

There is an unambiguous and lasting label (manufacturer, product name, serial number etc) on the product.

The labelling is linked to the technical documentation which makes the product clearly identifiable.

Product design

These products are electronic controllers. They consist of two assembled circuit board mounted in a plastic casing intended for DIN rail, cabinet or wall mounting. The enclosure has six main parts and is assembled without screws.

Component modules	Weight grams	Weight %
Enclosure	196	42-45
Electronics assembly	171-175	37-39
Display module	27	0-6
Terminals	33	7-7,5
Earth connectors	35	7,5-8
Earth cable	3	<1

PRODUCT INFORMATION, RESOURCES AND HAZARDOUS SUBSTANCES		
Component modules	Resources (metals, organic, non-organic substances)	Hazardous substances (Kd, Hg, Pb, PCB, PVC, PBB, PBBE etc)
PCB assembly	Epoxy, Cu, Fe, Ag, Sn	TBBPA
Casing	PC	
Screw terminals	PA, Fe, Zn	
Buttons	Rubber	
CR2032 battery	Li	

Notes, the product's content

PRODUCTION

The components are mounted manually and automatically and are thereafter soldered together with classified soldering. The environmental consequences are negligible and consist solely of air outlet from soldering. The operation does not require licencing

DISTRIBUTION

Production origin Hultsfred, Sweden
Mode of transportation Lorry, train
Mode of distribution The product is normally distributed via a warehouse/wholesaler
Wrapping Material Wood, paper, plastic
 Packaging material can not be returned.
 AB Regin is connected to FTI.

BUILDING PHASE

Documented instructions for mounting and commissioning are included with the product.
 The instructions contain recommendations concerning

- Safeguard measurement for handling procedures and mounting.
- Handling of the product at the workplace and during mounting.

USAGE PHASE**Normal operation**

The product requires energy (electricity) during normal operation. Power consumption is <1 IVA.
 The product does not have any environmental impact on the surrounding environment during normal operation.

Normally, the product does not require any maintenance.

It is possible to estimate the product's life span in advance.

There is no documentation concerning the expected life span when the product is under different conditions.

Documented instructions for appropriate operation and maintenance are supplied with the product.

Emergency

In case of fire the plastic may emit gases harmful to human health. The amounts of these substances are small compared with the size of the product.

Circuit boards may emit toxic flue gases.

DEMOLITION

The product is prepared for environmental-friendly dismantling.

Dismantling of the product:

1. Open the product cover according to the supplied instructions.
2. Use a screwdriver or other appropriate tool to separate the plastic, electronic parts and battery and recycle at appropriate facility.

WASTE MANAGEMENT

The long life span of the product means that the recycling situation may differ from today when the product is recycled.

The product is required, by law, to be handled according to standard waste management procedures.

The materials can easily be separated to a high separation degree.

Plastic parts can, theoretically, be recycled. Recovering of energy through combustion is considered the best option in the present situation, since the plastic does not contain any substances dangerous to the environment.

Circuit boards with components are required by law to be dismantled and constituent components to be identified. Swedish companies in electronic recycling separate in three main fractions. Recycling of materials, recovering of energy and dangerous waste.

Identified metallic constituents are returned to metal recycling.

Combustible materials are returned for safe disposal in a licenced incinerator.

Dangerous waste is returned for destruction to a licenced entrepreneur.
